

BARRING AND STARTER MOTOR MOUNTING BRACKETS

SUPERIOR™ 825 VEE ENGINES

Mounting brackets available from Cooper enable barring and starter motors to be added to all Superior 825 Vee engines. Pneumatic barring motors deliver highly reliable, precision-controlled slow engine turning and stopping that makes it easier and safer to service gas engines. Pneumatic starter motors provide high power-to-weight ratio and reliable starting for gas engines.

Pneumatic barring motors can replace and/or be used in conjunction with manual barring devices and provide significant reduction in injury risk than handling heavier manual barring devices. Supplied with up to 150 psig air, barring motors can deliver sufficient torque to bar over engine and compressor frame combinations. The mounting bracket is designed to ensure safe motor-to-flywheel engagement. Barring motors increase the efficiency of both engine and compressor frame maintenance.

Pneumatic starter motors offer safe, light-weight, and highly reliable starting. Using reputable turbine type motor technology, they can outlast other starter technologies, and can be easier to rebuild. The starter motor mounting brackets are interchangeable with original engine mounted start motor brackets.

Kit Includes

- › Fabricated bracket
- › Installation hardware (bolts and washers)

Some modifications may be required dependent upon customer site specifics (equipment guards, system piping, foundation configuration, etc.).

Engineering assistance available for application/integration of control scheme (interlock/directional) or application to other models.
