

MAGNETIC PICK-UP MOUNTING BRACKETS

SUPERIOR™ 825 ENGINES

Mounting brackets available from Cooper enable magnetic pick-ups to be added to all Superior 825 engines. Magnetic pick-ups are added for precise engine controls including ignition timing, fuel management, start-up sequence, motor control centers and other run status indicators.

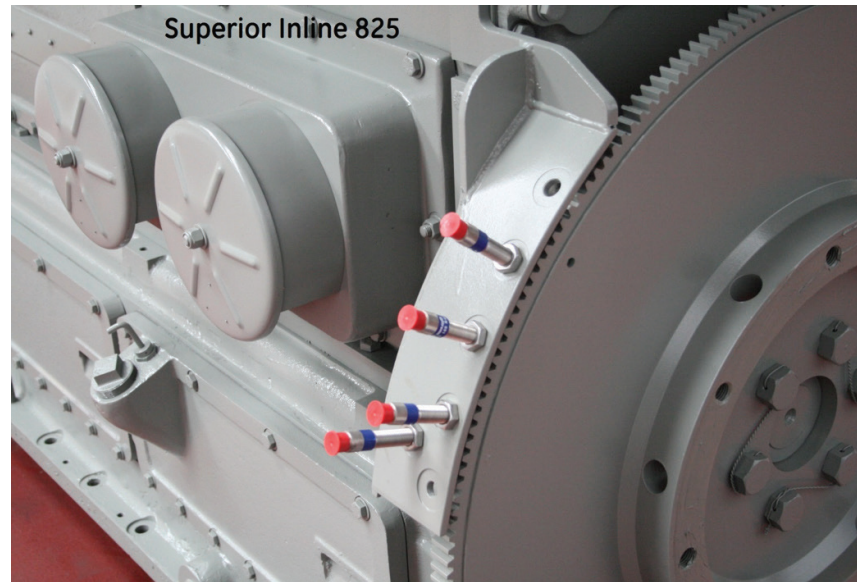

Cooper's mounting brackets are available for both Inline and Vee configurations. Ready made, completely fabricated mounting brackets are available for each.

Mounting brackets are easy to install. The kits contain installation hardware and utilize the existing on-engine bolting arrangement provided there has been no further installation modification(s).

Kit includes

- Fabricated bracket
- Installation hardware (bolts, studs, washers)

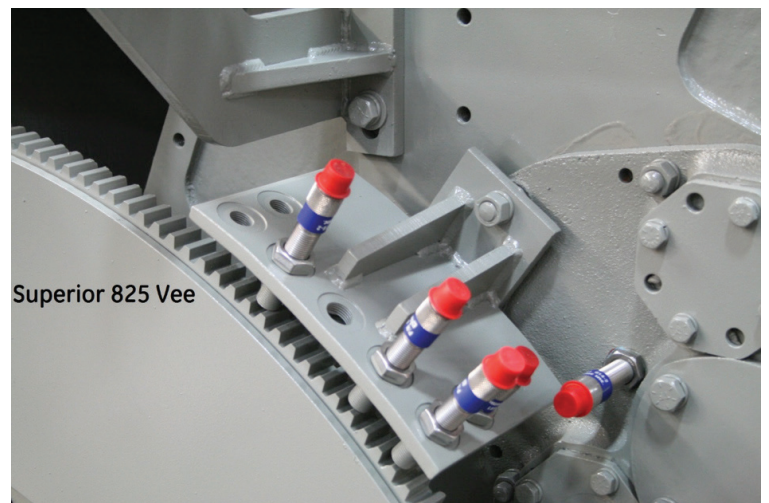

Some modifications may be required dependent upon customer site specifics such as equipment guards, system piping, foundation configuration, etc.
